Dear Viktor -

You are right on all counts - please forgive ^{however,} my boorishness. I feel it is ~~extra~~ essential, ^{to} bring in your old quotes, first, to make it clear that I have not established the conceptual dichotomy and, two, ^(lock up) to set [^] the record straight. It is very thick-skinned of me to pile insinuations of a negative sort on top of that and they will be deleted.

I hope you will take the remark (enclosed) in the Dedication to Preyer as a token of my esteem. You have indeed introduced significant experimental methods into our field and your searching theoretical analyses are of the keenest and most penetrating (and to me, the most stimulating) sort. With apologies,
Gilbert
