19<sup>th</sup> February 1967

Dear Dr. Hamburger,

I have read your recent paper on prehatching motility hatching behaviour with great interest. My own work is on the establishment of lung ventilation, the asynchronisation of hatching in trout + thus borders on your field. If you have any still available I would be very grateful for more reprints of.

Quart Rev. Biol. 38. 342-365 (1963)
